

Cuddle Buns

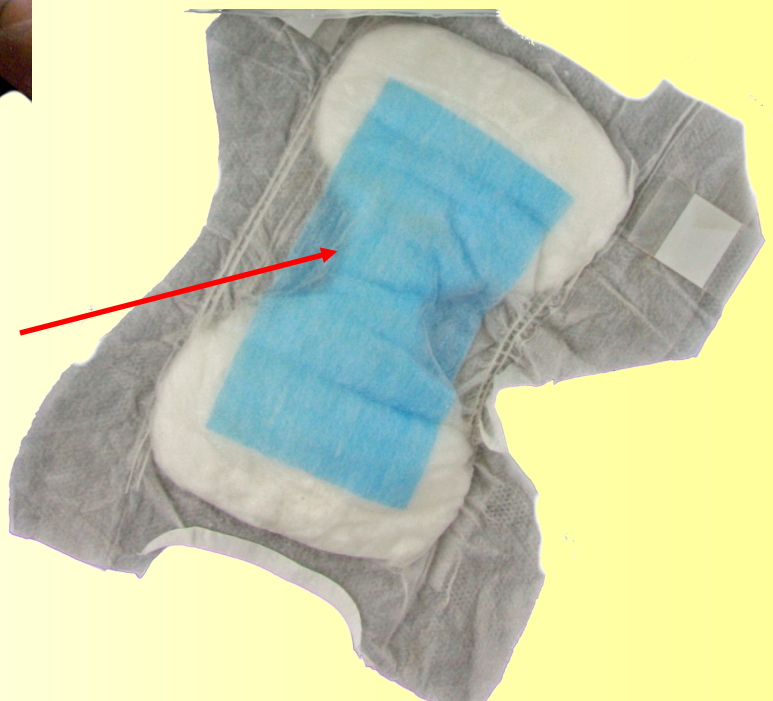

What makes our diapers so special?

The answer ...
The narrow crotch.
Our pads are figure-eight in shape. This helps keep the baby positioned to prevent abduction.

Premature Infants: A Later Look
"Correctly sized diapers is one such simple invention. For example, it was found that preemies who are put in diapers that are too large must keep their legs spread apart in order to accommodate the extra fabric. This resulted in incorrect turn-out of the hips and thus later, motor problems."

Cuddle Buns also have NO exposed plastic that can stick to baby's sensitive skin, and they have hook & loop attachments instead of tape.
